

**Description & Function:**

Magma-Fiber® is manufactured by Lost Circulation Specialists Incorporated. Magma-Fiber is a specially formulated extrusion spun mineral fiber. This coarse and long, flexible fiber will give increased circulation by bridging and plugging off voids, fractures, and all types of permeable formations.

**General Application Instructions:**

Magma-Fiber is a fluid loss additive for use in a KB's earth stabilization systems. Magma-Fiber is inert and does not significantly alter the system's viscosity, as do traditional fluid loss agents such as starches, cellulose, or reactive colloids such as bentonite. The general guidelines for addition of Magma-Fiber are; pour the product slowly (sifting) in ½ bag to full bag increments into fresh or recycled slurry in the mix tank or at the hole.

In addition to assisting with fluid loss control, Magma-Fiber assists with formation wall stabilization as it acts as a light grouting agent.

**Packaging:**

Magma-Fiber Coarse is available in: 14 kilogram / 30 pound bags.

Magma-Fiber Fine is available in: 11 kilogram / 25 pound bags.

**Availability:**

Magma-Fiber is available out of KB International's warehouses or from our distribution partners worldwide.
